Pearson Edexcel International GCSE  
In Geography (4GE1)  
Paper 01: Physical Geography

## **Edexcel and BTEC Qualifications**

Edexcel and BTEC qualifications are awarded by Pearson, the UK's largest awarding body. We provide a wide range of qualifications including academic, vocational, occupational and specific programmes for employers. For further information visit our qualifications websites at [www.edexcel.com](http://www.edexcel.com) or [www.btec.co.uk](http://www.btec.co.uk). Alternatively, you can get in touch with us using the details on our contact us page at [www.edexcel.com/contactus](http://www.edexcel.com/contactus).

## **Pearson: helping people progress, everywhere**

Pearson aspires to be the world's leading learning company. Our aim is to help everyone progress in their lives through education. We believe in every kind of learning, for all kinds of people, wherever they are in the world. We've been involved in education for over 150 years, and by working across 70 countries, in 100 languages, we have built an international reputation for our commitment to high standards and raising achievement through innovation in education. Find out more about how we can help you and your students at: [www.pearson.com/uk](http://www.pearson.com/uk)

## General Marking Guidance

- All candidates must receive the same treatment. Examiners must mark the first candidate in exactly the same way as they mark the last.
- Mark schemes should be applied positively. Candidates must be rewarded for what they have shown they can do rather than penalised for omissions.
- Examiners should mark according to the mark scheme not according to their perception of where the grade boundaries may lie.
- There is no ceiling on achievement. All marks on the mark scheme should be used appropriately.
- All the marks on the mark scheme are designed to be awarded. Examiners should always award full marks if deserved, i.e. if the answer matches the mark scheme. Examiners should also be prepared to award zero marks if the candidate's response is not worthy of credit according to the mark scheme.
- Where some judgement is required, mark schemes will provide the principles by which marks will be awarded and exemplification may be limited.
- When examiners are in doubt regarding the application of the mark scheme to a candidate's response, the team leader must be consulted.
- Crossed out work should be marked UNLESS the candidate has replaced it with an alternative response.

## **Marking guidance for levels-based mark schemes**

### **How to award marks**

The indicative content provides examples of how students will meet each skill assessed in the question. The levels descriptors and indicative content reflect the relative weighting of each skill within each mark band.

### **Finding the right level**

The first stage is to decide which level the answer should be placed in. To do this, use a 'best-fit' approach, deciding which level most closely describes the quality of the answer. Answers can display characteristics from more than one level, and where this happens, markers must use the guidance below and their professional judgement to decide which level is most appropriate.

### **Placing a mark within a level**

After a level has been decided on, the next stage is to decide on the mark within the level. The instructions below tell you how to reward responses within a level. However, where a level has specific guidance about how to place an answer within a level, always follow that guidance. Statements relating to the treatment of students who do not fully meet the requirements of the question are also shown in the indicative content section of each levels-based mark scheme. These statements should be considered alongside the levels descriptors.

Markers should be prepared to use the full range of marks available in a level and not restrict marks to the middle. Markers should start at the middle of the level (or the upper-middle mark if there is an even number of marks) and then move the mark up or down to find the best mark. To do this, they should take into account how far the answer meets the requirements of the level:

- if it meets the requirements fully, markers should be prepared to award full marks within the level. The top mark in the level is used for answers that are as good as can realistically be expected within that level
- if it only barely meets the requirements of the level, markers should consider awarding marks at the bottom of the level. The bottom mark in the level is used for answers that are the weakest that can be expected within that level
- the middle marks of the level are used for answers that have a reasonable match to the descriptor. This might represent a balance between some characteristics of the level that are fully met and others that are only barely met.

Question number	Answer	Mark
<b>1(a)</b>	<p style="text-align: center;"><b>AO1 (1 mark)</b></p> <p>B</p> <p>The other examples are all other types of weather data.</p>	<b>(1)</b>

Question number	Answer	Mark

<b>Question number</b>	<b>Answer</b>	<b>Mark</b>
<b>3(d)</b>	<p style="text-align: center;"><b>AO2 (2 mark)/AO3 (2 mark)</b></p> <p>Award 1 mark (AO3) for the identification of a characteristic of a tropical cyclone and a further mark for explanation (AO2) up to a maximum of two marks each.</p> <ul style="list-style-type: none"> <li>• Areas of warm ocean/water (1) cause air to rise/areas of low pressure (1).</li> <li>• There are thunderstorms (1) because the clouds are tall in height (1).</li> <li>• There is rainfall (1) because of thunderstorms being present (1).</li> <li>• The eye is calm (1) because the winds are deflected by Coriolis force (1).</li> <li>• The eye wall is most violent (1) because of the strong winds created (1).</li> </ul> <p>Accept any other appropriate response.</p>	<b>(4)</b>

Question number	Answer	Mark
3(e)	<p style="text-align: center;"><b>AO3 (1 mark)</b></p> <p>Award one mark for the following:</p> <ul style="list-style-type: none"> <li>• Crater (1)</li> </ul>	<b>(1)</b>

Question number	Answer	Mark
3(f)	<p style="text-align: center;"><b>AO1 (2 mark)/AO2 (2 mark)</b></p> <p>Award 1 mark (AO1) for the identification of a physical and social factor and a further mark for explanation (AO2) up to a maximum of two marks each.</p> <p><b>Physical:</b></p> <ul style="list-style-type: none"> <li>• Being an area of low-lying land (1) makes the likelihood of flooding (from storm surges) increase (1)</li> <li>• Being located between the tropics (1) increases vulnerability as the sea is warm enough for tropical cyclones to form (1)</li> <li>• Being located on the coastline (1) as this is where cyclones will make landfall and be at their strongest (1)</li> </ul> <p><b>Social:</b></p> <ul style="list-style-type: none"> <li>• Having a population with lots of very elderly people (1) increases vulnerability as they need help to evacuate (1)</li> <li>• Having a very young population (1) can increase vulnerability as they need help to evacuate (1).</li> <li>• Having a poorly educated population (1) means they will not know what to do/where to go when a cyclone hits (1).</li> <li>• Not planning for evacuation (1) can increase the risk of injury/death (1)</li> </ul> <p>Accept any other appropriate response.</p>	<b>(4)</b>

Question number	Answer	Mark
3(g)	<p style="text-align: center;"><b>AO3 (4 mark)/AO4 (4 mark)</b></p> <p><b>Marking instructions</b></p> <p>Markers must apply the descriptors in line with the general marking guidance and the qualities outlined in the level-based mark scheme below.</p> <p><b>Indicative content guidance</b></p> <p>The indicative content below is not prescriptive, and</p>	

candidates are not required to include all of it. Other relevant material not suggested below must also be credited.

This question is about analysing the significance of different plate margins in causing hazards. Candidates will need to be able to identify the different scale of hazards caused at different plate margins and consider the most dangerous plate margin to live near.

**A03**

- Volcanic eruptions at divergent plate margins are often low explosivity, with mainly lava eruptions. The lava is often runny and flows quickly. However, these shield volcano eruptions are often more frequent.
- Volcanic eruptions at convergent plate margins are often more explosive. Where composite volcanoes form resulting in eruptions which include pyroclastic flows, lahars, lava, volcanic bombs. These eruptions are often less frequent.
- Earthquakes at convergent plate margins are often quite high magnitude due to 'stuck/slip' faults. These lead of high amounts of pressure building between earthquakes making the magnitude bigger when the fault ruptures.
- Earthquakes at transform plate margins are often high magnitude due to the 'stuck/slip' nature of the faults.
- Earthquakes at divergent plate margins are often low magnitude resulting in little/no damage to human property/life.

**A04**

- Iceland is located on a divergent plate margin resulting in low explosivity eruption.
- Nepal is located on a convergent plate margin between two continental plates and experienced a 7.8 magnitude earthquake.
- The Tonga eruption was fairly explosive (VEI 5) due to it being at a convergent plate margin.
- The New Zealand earthquake had a magnitude of 7.8 as its located on both transform and convergent plate margins.
